

Table of Contents

Chapter 0 – Mathematical Preliminaries

0.0 Introduction	1
0.1 Sets and tuples	2
0.2 Functions and relations	7
0.3 Graphs and trees	14
0.4 Proof techniques	17
0.5 Suggestions for further reading	24

Part I — The Finite State Paradigm

Chapter 1 – Regular Expressions and Acceptors

1.0 Introduction	26
1.1 Regular expressions	28
1.2 Finite state acceptors	41
1.3 Equality of regular expressions and acceptors	60
1.4 Two-way acceptors [‡]	69
1.5 Summary	80
1.6 Exercises	81

Chapter 2 – Properties of Regular Languages

2.0 Introduction	90
2.1 The pumping lemma and non-regular languages	91
2.2 Additional properties of regular languages	97
2.3 Regular languages and quotients	105
2.4 An application to structured programming [‡]	115

2.5 An application to algorithm design [‡]	120
2.6 Summary	127
2.7 Exercises	128

Chapter 3 – Transducers and Other Variations

3.0 Introduction	136
3.1 Transducers and their functions	137
3.2 State minimization	147
3.3 Black box experiments [‡]	161
3.4 Multi-tape automata	169
3.5 Summary	179
3.6 Exercises	180

Part II — Context-free Grammars and Automata

Chapter 4 – Basic Grammar Definitions

4.0 Introduction	188
4.1 Definitions and basic properties	189
4.2 Derivation trees and ambiguity	201
4.3 Normal form grammars	210
4.4 Regular grammars	217
4.5 Programming language syntax [‡]	222
4.6 Summary	234
4.7 Exercises	235

Chapter 5 – Push-down Store Automata

5.0 Introduction	242
5.1 Basic definitions	243
5.2 Equivalence with context-free grammars	252
5.3 Deterministic push-down acceptors	262
5.4 Summary	275
5.5 Exercises	276

Chapter 6 – Properties of Context-free Languages

6.0 Introduction	282
6.1 Closure properties	283
6.2 The context-free pumping lemma	293
6.3 Parsing and other algorithms	302
6.4 Grammars as systems of equations [‡]	311
6.5 An application to recursive program analysis [‡]	320
6.6 Summary	335
6.7 Exercises	336

Part III — General Computability Models

Chapter 7 – Context-sensitive Languages

7.0 Introduction	342
7.1 Basic definitions and results	343
7.2 Linear bounded automata	357
7.3 Closure properties of context-sensitive languages	377
7.4 Summary	384
7.5 Exercises	385

Chapter 8 – Turing Machines and Computability

8.0 Introduction	390
8.1 Basic definitions	391
8.2 Turing machines and recursive functions	409
8.3 Turing machines and the RASP model	422
8.4 Turing recognizers and unrestricted grammars	429
8.5 Summary	440
8.6 Exercises	442

Chapter 9 – The Universal Machine and Impossible Computations

9.0 Introduction	448
9.1 A Universal Turing machine	449
9.2 The halting problem and related questions	458

9.3 Decision problems for grammars	467
9.4 Decision problems for other models	479
9.5 Summary	483
9.5 Exercises	485

Appendix: Sample Solutions

Chapter 1	491
Chapter 2	494
Chapter 3	498
Chapter 4	500
Chapter 5	505
Chapter 6	508
Chapter 7	511
Chapter 8	514
Chapter 9	520
Bibliography	523
Index	529
