

Project/Problem Specification

Teodor Rus

September 21, 2009

To be graded, your self-selected projects/problems need to be specified, resolved, and submitted for grading following the rules:

1. Formulate the problem (25%);
2. Provide a solution (an algorithm, the sketch of a program, a natural language explanation, etc.) (25%);
3. Implement the solution you specified at (2) above (25%);
4. Provide a user manual for your solution implementation (25%) which contains the following information:
 - (a) Where is the program you have implemented;
 - (b) How to compile the program you have implemented;
 - (c) How to run the program you have implemented;
 - (d) Give information about program behavior. If there is no such information, just state that there is no such information.
