Job Description
Are you looking to have a direct impact on a high-growth, early stage startup? Here's your chance. You will work closely with the Settln team to build out the front-end of our web application that will be used in our private beta. You will gain real-world skills that will be invaluable as you take the next steps in your career.

Settln (www.settln.com) is a personalized home search site that helps home buyers find the perfect home for them. We are looking to revolutionize the online home search space that is in dire need of disruption. Do you think you have what it takes to help us disrupt this huge industry?

Qualifications
- Proficiency in HTML, CSS, and JavaScript.
- Previous experience with front-end development
- Ability to learn new things, such as JavaScript libraries
- Passion for building innovative products

Work Schedule
You can work whenever you'd like throughout the week as long as you work approximately 10 - 20 hours per week

Time table
We envision having this front-end development completed by the end of the semester

Email andrew@settln.com if interested.
